9/13/95

Dear Bill,

The sketch with your S/S is roughly w at I'd a k the friend t- make but apparently he could not. With a pin to go through both pipes is should be stable ~~xxxxxhxx~~ enough.

There is something you should know: I'm not sup o sed to use any tools and I can bleed from mere contact with a flat surface, subcutaneou ly. So mostly I should not use my tools.

As best I can measure the distance from the floor to the top of the base, and this includes the 2" crazy wheels, it is about 2" if you need that dimension.

The neight you ask for is the unknown. I believe the present height is a bi t too much but how much les it should be is cut and-try.

And a caution about that pin or bolt, it should go from front to back, not side to side, because either leg can touch the column when - type and they also are a quite susceptible to bleeding and bruising and take longer to heal.

Again many thanks,

Harold
